Education

August 2017 - Bachelor of Science in Computer Science, Georgia Institute of Technology, Atlanta, GA

December 2021 O GPA: 3.88/4.00

- O Threads: Intelligence, Info & Internetworks
- o Selected Coursework: Data Structures and Algorithms, Database Technologies, Machine Learning, Computer Networking, Systems and Networks, Intro to Artificial Intelligence, Intro to Info Security, Computer Organization

Experience

October 2022 - Software Development Engineer, Amazon Web Services, Atlanta, GA

Present O TBD. Working on the Fleet Indexing team for the IoT Device Management service

February 2022 - **Software Engineer**, NCR Innovation Lab, Atlanta, GA

- September 2022 O Designed and implemented an internal HTTP API that serves as an abstraction layer on top of a collection of retail product advertisement engines. Allows clients to specify which engine they'd like to invoke in each request without needing to know where instances of that engine are deployed. Built with Node.js and TypeScript, and deployed to Google Kubernetes Engine
 - O Used OpenCV, OpenPose, Python, and InfluxDB to build a vision-based inference application that powers a real-time "heatmap" visualization of foot traffic on a retail store's floor plan
 - Conducted technical and behavioral interviews for intern and full-time candidates

May 2021 - Software Engineer Intern, NCR Innovation Lab, Atlanta, GA

- December 2021 O Architected and developed a full stack application that collects insights and displays analytics about the behavior of a retail store's customers. Consumes real-time data streams from proprietary edge compute devices. Identifies over 3,000 unique customers per week. Built with React, BigQuery, WebSockets, Google Cloud Pub/Sub, and Google Cloud Functions
 - Onboarded 3 new developers to the project via remote and in-person pair programming sessions, and by creating video tutorials

June 2020 - MLH Fellow, Major League Hacking, Remote

- August 2020 O Selected as one of 150 Fellows from a pool of 20,000 applicants to be a member of the Fellowship's inaugural class
 - Used TypeScript and a cross-compilation toolchain to implement functionality in the AWS Amplify CLI that allows users to write, test, and deploy AWS Lambda functions with the Swift programming language and runtime
 - O Wrote user-facing documentation and guides, as well as developer-facing design documents, with the AWS Amplify team

January 2018 - Rise Up Undergraduate Assistant, College of Computing, Georgia Institute of Technology, Atlanta, GA

- May 2020 O Led weekly webinars and monthly in-person sessions, explaining and demonstrating fundamental computer science concepts to groups of 30 Georgia high school students
 - Helped organize and run the 2018 and 2019 AP Bowl, during which over 300 Georgia high school students took a mock AP Computer Science exam on Georgia Tech's main campus

Involvements

August 2019 - **GT Solar Racing**, *Telemetry Team Member*

- May 2021 O Redesigned a byte-oriented telemetry message protocol to support 4x more message types to and from the vehicle
 - o Maintained a server written in Go that listens for and processes the vehicle's vitals in real time via a TCP connection
 - O Integrated Grafana with InfluxDB to build a real-time dashboard for monitoring the state of the vehicle as it races

Personal Projects

Command Line lancp, A simple tool for easily transferring files between two machines on the same network

- Interface O Wrote a tool with Go that is similar to scp and rsync, but more convenient to use
 - Allows two devices to trustlessly discover each other via plaintext passphrases in UDP broadcast messages
 - Sends file contents over a secure TLS connection after generating and exchanging a self-signed X.509 certificate

Discord Bot HMM Mimicker, Generates messages of the same vocabulary and sentence structure as a corpus

- O Uses a hidden Markov model built from a customizable corpus to produce messages in a Discord text channel
- O Used Go to implement a content generation model, and to build a bot which parses commands from users and posts messages
- Wrote a comprehensive unit and integration test suite. Containerized and deployed to Cloud Run

Skills and Attributes

Languages TypeScript, JavaScript, Python, Java, Go, Bash

Technologies git, Linux, Docker, Amazon Web Services, Google Cloud Platform, Node.js, Express, Jest, React, PostgreSQL, InfluxDB, Grafana

Interests Rust, distributed systems, maintainable and testable software, free and open-source software
